Audio recording

Data collection

Location tracking

Social media

**7 Audio recording**

Could facilitate remote monitoring and stalking.

8 Voice control

May enable perpetrators to contact the victim as well as trace and review a person's history of commands and purchases.

9 Router

Connects all smart home devices to the Internet.

Tech Abuse — Smart, Internet-connected devices present new risks for victims of domestic violence & abuse

1 Wearable devices

Could allow perpetrators to track and monitor movements and other behavioural patterns drawing on GPS signals and other collected data.

2 Phones

Could provide perpetrator an access point to control various IoT devices.

3 Laptops and tablets

Accounts between devices are linked and could allow perpetrators to change and review IoT devices' settings via an Internet browser.

4 Remote control of heating, lighting and blinds

Could be used to coerce and intimidate victims by switching systems on or off from afar.

5 Security cameras and TVs

Could facilitate remote monitoring and online stalking; video recording could facilitate image-based abuse (such as revenge porn).

6 Smart security

Could provide access to doors through voice activation, apps, or electronic key codes.

Ending domestic abuse

SafeLives Dash risk checklist

Quick start guidance

You may be looking at this checklist because you are working in a professional capacity with a victim of domestic abuse. These notes are to help you understand the significance of the questions on the checklist. Domestic abuse can take many forms but it is usually perpetrated by men towards women in an intimate relationship such as boyfriend/girlfriend, husband/wife. This checklist can also be used for lesbian, gay, bisexual relationships and for situations of 'honour'-based violence or family violence. Domestic abuse can include physical, emotional, mental, sexual or financial abuse as well as stalking and harassment. They might be experiencing one or all types of abuse; each situation is unique. It is the combination of behaviours that can be so intimidating. It can occur both during a relationship or after it has ended.

The purpose of the Dash risk checklist is to give a consistent and simple tool for practitioners who work with adult victims of domestic abuse in order to help them identify those who are at high risk of harm and whose cases should be referred to a Marac meeting in order to manage their risk. If you are concerned about risk to a child or children, you should make a referral to ensure that a full assessment of their safety and welfare is made.

The Dash risk checklist should be introduced to the victim within the framework of your agency's:

- Confidentiality policy
- Information sharing policy and protocols
- Marac referral policies and protocols

Before you begin to ask the questions in the Dash risk checklist:

- Establish how much time the victim has to talk to you: is it safe to talk now? What are safe contact details?
- Establish the whereabouts of the perpetrator and children
- Explain why you are asking these questions and how it relates to the Marac

While you are asking the questions in the Dash risk checklist:

- Identify early on who the victim is frightened of – ex-partner/partner/family member
- Use gender neutral terms such as partner/ex-partner. By creating a safe, accessible environment LGBT victims accessing the service will feel able to disclose both domestic abuse and their sexual orientation or gender identity.

Risk Assessment

TALK TO SOMEONE YOU TRUST

Whether it be a family member, neighbor, colleague, us or a local shelter.

Safety Plan

KEEP EVIDENCE OF ABUSE

Screenshots of texts, photos of physical harm, letters, police reports, dates, times and locations.
